Introduction to Florida's Address/Jurisdiction Database

Since 2001, the Florida Department of Revenue has maintained a statewide electronic database that designates the local taxing jurisdiction (e.g. municipality, unincorporated county area, police, and fire district) for addresses in Florida. The database has over 10 million single address records for the over 400 incorporated municipalities and 67 counties of Florida. The database designates the local taxing jurisdictions for Communications Services Tax (CST). For Insurance Premium Tax (IPT), the database indicates the police and fire codes for those local jurisdictions participating in Chapter 175 and/or Chapter 185 of the Florida Statutes.

As the state continues to grow, new development and local government actions generates changes within municipal boundaries that directly affect the addresses in the database. Many local governments are using Geographic Information Systems (GIS) to maintain parcel-based data and jurisdictional boundaries, and more recently, internet-based web mapping for making their local data available to the general public. Because of the advances in GIS technology, the PointMatch web application was designed and implemented in 2013 to allow online updating and maintenance of the Address/Jurisdiction Database. This user guide provides instructions and tips to assist users with maintaining and updating their addresses in the database.

Public Use of the PointMatch Web Application

The PointMatch website provides public users access to Florida's Address/Jurisdiction Database without registering to create an account. The three public features are:

- **Address Lookup** allows a user to find tax rates for any address in Florida. Searches can be conducted in a variety of ways and results are returned based on the users search criteria. Results are displayed in a grid table and can be sorted in several ways for easier viewing. The search is performed on both published and pending addresses which will become effective in a future update.
- **Master Address List Download** provides a user the ability to download address listings in the entire state database or download a portion of the state by county, jurisdiction or special fire district. The database is composed of 67 county sub-files. Currently, there are four (4) incorporated municipalities that traverse county boundary lines. Those are:
 - Fanning Springs in Levy and Gilchrist counties;
 - Flagler Beach in Flagler and Volusia counties;
 - Longboat Key in Manatee and Sarasota counties; and
 - Marineland in Flagler and St. Johns counties.

With addresses in multiple counties, users will need to search the files of two counties to get all addresses for those multi-county municipalities. In cases, where an address crosses jurisdictional boundaries, users must download two jurisdictions to get all the units for that multi-jurisdictional address.

- **Request a Correction** allows public users to file objections for omitted or incorrect addresses in the database. This feature is discussed in detail later in the User's Guide.

Address Lookup Information

Search results are displayed based on the criteria entered by the user. Vague or broad searches may return numerous addresses. It may be necessary to be specific in a search to return a smaller number of results or to sort the results table to organize the addresses returned.

The default sorting order is ascending by street name. This is displayed in the "Street" column by a blue up-pointing arrow and the number "1" next to the arrow. Results can be further sorted by any or all other columns. For each column sorted, a number appears next to the name to show the current order of the sorted result. In the example below, the search performed is for all streets in the state with "Cleveland" in the name. It is sorted by: 1) Street, 2) Suffix, 3) PreDir, 4) PostDir, and 5) Number. The search resulted in 2,975 entries and shows the first 10 results. The sort affects all results, not just the page displayed.

Page **1** of 298 [Go](#)

← Navigate by page.
 ← Column headings, sortable.
 First 10 results.
 ← Navigate by page.

By clicking the column name once, this sorts data by the column name in ascending order. Clicking the column name twice will sort by column name in descending order. Clicking the column three times will remove the sorting from the column. Sort criteria for the results table are saved each time a search is performed. Clicking the “Clear” action button will only clear the fields and will not remove the sorting order. Thus, the user will be required to either manually unsort all columns or click the Address Lookup link on the left-side navigation menu to clear the page and start over.

Ascending order sorts text from A to Z and numeric information from low to high.

Descending order sorts text from Z to A and numeric information from high to low.

Address Information Display

Once a search is performed, information for the yellow highlighted address is displayed below the search results table. This information is specific to only the highlighted address. It is important to note that tax rates in Florida differ from jurisdiction to jurisdiction. When locating rates for an address, the “City” name does not equate to “Jurisdiction.” The City name column only denotes the *mailing* city associated with the ZIP code and should not be used to determine the taxing jurisdiction of the address. For a selected address, specific information regarding the total local rate and state tax rate for Communications Services Tax is provided. The Sales and Use Tax rates, including Discretionary Sales Surtax are listed separately. Local Option Tourist Development Tax rate (bed tax) can be found by clicking the link to the table of these rates. Links are provided for other information on tax rates.

Selected Address Tab: Information displayed is the general mailing information for the address highlighted on the grid table. If the address is pending, additional details are displayed.

General Details Tab: Displays the county and place codes for the selected address. If the jurisdiction has a participating fire district, the codes will also be displayed.

Communications Services and Sales Tax Tabs: Displays the current tax rates for the jurisdiction of the address. Additional information links are provided for the user to research each tax type.

Other Tax Links Tab: Provides a link to the Department’s website for Insurance Premium Tax information.

Request a Correction Tab: This section allows the user to request a correction to the selected address. This will initiate the objections process for the selected address. This is discussed in detail later in the User’s Guide.

General Information Tables

Several tables are provided with general information on tax rates and codes used in the PointMatch system. The Communications Services Tax (CST) Rate table provides current information on CST rates for all jurisdictions in Florida. The Discretionary Sales Surtax (DSS) Rate table provides the current DSS rates for all Florida counties. The County and Place Codes table (see *County FIPS Codes and Place Feature ID Codes* section) provides the jurisdictional codes for all jurisdictions in Florida. The Fire Codes and Police Codes tables (described in more detail below) provide the 3-digit fire and police codes for all taxing jurisdictions. All tables have sorting, filtering, and downloading capabilities.

Filtering Tips

The filtering feature on the provided tables allows a user to “filter out” specific information for jurisdiction. There are two methods of filtering available:

Selection Filter: Some columns can be filtered by the information within the column. By selecting the filter icon, the user can check one or more boxes to determine the exact information to be displayed as shown below.

Showing 1 to 25 of 195 entries. [Download All](#) First Prev Next Last

| # | Code | Name | County | Eff. Date | Exp. Date |
|----|------|---|--------|-----------|-----------|
| 1 | 015 | <input type="checkbox"/> Select All | | 1/1/2000 | |
| 2 | 017 | <input checked="" type="checkbox"/> ALTAMONTE SPRINGS | | 1/1/2000 | |
| 3 | 021 | <input type="checkbox"/> APOPKA | | 1/1/2000 | |
| 4 | 023 | <input type="checkbox"/> ARCADIA | | 1/1/2000 | |
| 5 | 024 | <input type="checkbox"/> ATLANTIC BEACH | | 1/1/2000 | |
| 6 | 025 | <input type="checkbox"/> ATLANTIS | | 1/1/2000 | |
| 7 | 027 | <input type="checkbox"/> AUBURNDALE | | 1/1/2000 | |
| 8 | 029 | ESTERO FCD | | 1/1/2000 | |
| 9 | 033 | HOLLEY-NAVARRE FCD | | 1/1/2000 | |
| 10 | 043 | MIDWAY FCD | | 1/1/2000 | |
| 11 | 047 | NORTH BAY FCD | | 1/1/2000 | |

Data Filter: In some columns, the user can filter the data in a column to return a broader range of information. This feature first requires the user to set the parameters of the data (e.g., contains, does not contain, begins with) then to enter values to return.

| # | Code | Name | County | Eff. Date | Filter | Value | Exp. Date |
|---|------|----------------------|--------|-----------|------------------|-------|-----------|
| 1 | 015 | BOCA GRANDE FCD | | 1/1/200 | ends with | 2000 | |
| 2 | 017 | BONITA SPRINGS FCD | | 1/1/200 | is | | |
| 3 | 021 | DESTIN FCD | | 1/1/200 | is not | | |
| 4 | 023 | EAST LAKE TARPON FCD | | 1/1/200 | contains | | |
| 5 | 024 | EAST NAPLES FCD | | 1/1/200 | does not contain | | |
| 6 | 025 | EAST NICEVILLE FCD | | 1/1/200 | begins with | | |

County FIPS Codes and Place Feature ID Codes

To facilitate the correct identification of Florida local taxing jurisdictions, the PointMatch system uses 3-digit County FIPS Code and the 9-digit GNIS Feature ID, also called “Place Feature ID”. The Place Feature ID is a permanent, unique identifying number for a geographic feature record. This number is assigned by the Geographic Names Information System (GNIS) and used as a relational key for uniquely identifying, indexing, and searching geographic features and for integrating or reconciling GNIS data with other data sets. The number has no information content. The Place Feature ID supersedes the Federal Information Processing Standard (FIPS) 55 Place Code as the Federal standard unique feature identifier.

A compilation of all codes to identify a jurisdiction can be found under the General Information navigation area under *County and Place Codes*. These can be used determine the correct identifier for a local government. It is important to note that all unincorporated areas for Florida appear as “000000000” in the Place Feature ID field in the Master Address Listings. Special fire districts do not have assigned Place Feature ID codes.

The example below denotes 123 Main Street, Tallahassee FL, 32301 as being in the jurisdiction of Unincorporated Leon County.

| Address | Mailing City | ZIP | County | Jurisdiction | Jurisdictional Identifier for the Address |
|------------------------|--------------|-------|------------|------------------|--|
| 123 Main Street | Tallahassee | 32301 | 073 | 000000000 | 073 -- Leon County 000000000 -- Unincorporated Area |

Florida Fire and Police Codes

Addresses in the database are used by insurance companies to assign premiums to the proper local taxing jurisdiction for the purposes of the Firefighters’ and Police Offices’ Pension Trust Funds (Chapters 175 and/or 185, Florida Statutes). A fire or police code will only appear on the Florida Fire Codes and Florida Police Codes tables if the jurisdiction is currently participating in the local insurance premium tax associated with the Firefighters’ and Police Offices’ Pension Trust Funds.

When the Department of Revenue is notified by the Department of Management Services that a local taxing jurisdiction is participating or is no longer participating, the Department will update the codes on the addresses for that jurisdiction. Municipal fire and police codes are automatically updated because they are associated with the jurisdictional boundaries of a municipality. Special fire control districts do not generally follow municipal or county boundary lines; therefore the special fire control district must manually identify the addresses within its jurisdiction. It is also important to note that codes assigned to special fire control districts all begin with “0.”

For more information on Insurance Premium Taxes and Fees visit:

www.myflorida.com/dor/taxes/ipt/html.

For more facts and information on the Firefighters' and Police Offices' Pension Trust Funds visit:

http://www.dms.myflorida.com/human_resource_support/retirement/local_retirement_plans/municipal_police_and_fire_plans/facts_and_figures.

Pending Addresses Display

The address search result may return pending addresses not in the current published Master Address List. Addresses are updated and posted semi-annually 90 days prior to an effective date of January 1 or July 1. All local governments are primarily responsible for maintaining the address information provided on this site. Due to the frequent changes in municipal boundaries and the development of new subdivisions, this site may not be able to assign correct tax information to every address. However, the addresses are updated on a regular basis.

If a search results in a pending address to be reflected in a future published Master Address List, the address will be shown in red. The pending addition and the pending deletion will both show in the result table along with information in the Selected Address tab on actions being taken on the address. A search which returns a pending address will appear as follows:

| Showing 1 to 2 of 2 entries. Download All | | | | | | | | | | First | Prev | Next | Last |

Account Management

Registration for the PointMatch web application supports an organization's ability to either review and update the database, file objections to the database, or have a company database certified or recertified. Access to secure areas of the system is allowed only through password-protected log-in procedures. Additional features not available to public users are:

- **Address Lookup** allows a registered user all the features it offers to public users in addition to downloading address search results. For example, if a jurisdiction chooses not to download the entire jurisdiction because they would only like to see all addresses in a particular ZIP code or all address on one street, this feature accommodates this need. Sorting functions allow for easier manipulation of the resulting addresses.
- **Pending Address Files** downloads give registered users access to only addresses that are pending addition or deletion since the previous published Master Address List.

Account Types & Roles Types

Five account types are used to define an organization's jurisdictional or business functions in the database. Each account type is assigned an access code to permit registration of users within their organization. As a supplement to an account type, role types specify an individual user's purpose in the database for the organization. One of the following account types must be chosen for a user to begin creating an account profile:

Local Government Employee (GOV): This account type is for an employee of an unincorporated county or incorporated city in Florida who has been designated by the jurisdiction as a representative to monitor and/or maintain the jurisdiction's addresses in the database.

Communications Services Provider (CSP): Business that provides communication services within the state and is planning to certify or re-certify its own database to receive a higher collection allowance is assigned to this account type. A provider must also register to file an objection to the Address/Jurisdiction Database.

Communications Services Tax Address Vendor (CSV): This is account type is for businesses that provide database services to communications services providers for the assignment of customer addresses to tax jurisdictions in Florida, and would like to certify or re-certify their address database so their customers can receive a higher collection allowance. Vendors must also register to file an objection to the database.

Special Fire District Employee (SFD): This account type is for an employee of a Florida special fire control district who has been designated by the special fire district as a representative who will maintain fire code information in the Address/Jurisdiction Database for insurance premium tax purposes.

Insurance Company or Vendor (INS): An insurance company insuring property in the state. Registration is required for an insurance company or vendor to object to the Address/Jurisdiction Database.

Role types are required per account type to define the functions available to the user after registration. When registering, users must select at least one of the following, if available based on the account type selected:

Approver role is reserved for the GOV and SFD account types *only* and is authorized to review, revise and approve changes to the Address/Jurisdiction Database on behalf of a jurisdiction or special fire control district. Up to two (2) active approvers are allowed per jurisdiction or special fire district. Approvers will be designated as the official contacts for a taxing jurisdiction and their contact information will be in the Local Government Contact List for Communications Services Tax and the Local Government Contact List for Insurance Premium Tax.

Submitter role is allowed in all account types, but user functions will vary depending on the account type. For GOV and SFD account types, the Submitter is a user who will upload files to update and maintain address information in the database. Two (2) active submitters are allowed per jurisdiction or special fire district. For the CSP and CSV account types, the Submitter can upload files for objections or to certify or recertify an address database. For the INS account type, the Submitter can upload files for objections.

Read Only users are authorized to monitor database activities for an organization. For the GOV and SFD account types, this user can review project and case information but has no ability to submit, alter or approve updates. Five (5) active read only users are allowed per taxing jurisdiction. For the CSP and CSV account types, the user will be allowed to monitor certification progress. The Read Only role may not be used in combination with any other role and is not available for the INS account type.

The purpose of role creation for the PointMatch system is to ensure the right people are in the right position to efficiently and effectively update the system. For example, if an employee is working in the GIS or Information Technology Department, that person would be appropriate for the Submitter and/or Approver role(s). If an employee is working in the Finance Department or Office of Management and Budget, that person would be best served as an Approver rather than a Submitter. For other jurisdictions, one person may perform multiple functions and can occupy both roles. Before registration, it is best to take the time to decide who in the organization best fits the role description.

There are limits on account types and role type selections. Some account types do not require certain roles to perform the necessary duties prescribed for the chosen account type. Below is a brief explanation of these limits:

- **Local Government Employee**
 - Available roles: Approver, Submitter, and Read Only.
 - System Functions and Limits: Local governments are tasked with providing the addresses to update the Address/Jurisdiction Database. Therefore, the only function they cannot perform is filing objections to the database.
- **Communications Services Provider**
 - Available role: Submitter and Read Only
 - System Functions and Limits: Only the Submitter and Read Only role types are available. The Submitter can submit objections and submit files for certification or recertification.
- **Communications Services Tax Address Vendor**
 - Available roles: Submitter and Read Only
 - System Functions and Limits: Only the Submitter and Read Only role types are available. The Submitter can submit objections and submit files for certification or recertification.
- **Special Fire District Employee**
 - Available roles: Approver, Submitter and Read Only
 - System Functions and Limits: Special Fire Districts are tasked with providing the fire code information for addresses in the Address/Jurisdiction Database. They are not required to provide any other information for the address. If there are issues with missing or incorrect addresses, the fire district must contact the local government representative where the address(s) is located to have the information corrected and added to the database. Users in this account type cannot file objections to the database.
- **Insurance Company or Vendor:**
 - Available roles: Submitter
 - System Functions and Limits: Users of this account type can submit objections to the database. As such, the only role required for this type is the Submitter type.

Creating an Account and Updating Your Profile

The **first** Approver role access request for all taxing jurisdictions or special fire control districts, and all access requests by CSP, CSV, and INS account types, will be reviewed and approved by the Local Government Unit. When creating an account, the users email address will serve as the user ID. Once an approval or denial is made on a request, notification will be sent to the email on file alerting the user with instructions on any actions to be taken next. The email will contain a temporary password that must be changed at the first log in attempt.

The “Update My Profile” link is provided for users to change basic contact information. If a user moves to a new jurisdiction, it will be the responsibility of the previous jurisdiction Approver to disable the user’s access.

Maintaining Users

For GOV and SFD account types, the Approver role is tasked with approving, denying, and disabling users within their jurisdiction. A jurisdiction can have up to nine (9) active users at a time. The number of active users in a role cannot exceed the set limits mentioned above in the role descriptions. The “My Jurisdiction Users” queue displays the role and contact information for all past and present users in a jurisdiction. The Approver has the ability to remove access for former employees to make room for new employees requesting access. Email notifications are sent to the Approvers when a registration request is received for the jurisdiction. If the user is requesting assignment to a role that already has the maximum number of active users, the Approver must disable a user to allow a new user in the role. In the example shown below, a new user is requesting Submitter access in the Gainesville jurisdiction. The Approver must remove Submitter 2 to allow Submitter 3 access.

Step 1: Select “My Jurisdiction Users” in the Customer Account navigation area. From here the Approver can see the pending request from Submitter 3 and that there are already 2 active users occupying that role. Upon review of the pending request, the system will not allow approval of the request until a user has been removed.

[Add Role](#)

Many jurisdictions rely on county sources to maintain and supply their address database. The Submitter role was created to allow county representatives to upload the database on behalf of a municipality. The Submitter must request access from the Approver of the jurisdiction. An Approver cannot assign a Submitter to be responsible for this task. Once granted, the municipality will be authorized under the Submitter's rights. In the screenshot below, the Approver can view all jurisdictions within the county Submitter's rights, but can only remove the role or disable the user for their respective jurisdiction.

User Information
User Profile Information
First Name: Submitter #1
Last Name: UNINCORPORATED LEE
Title: Submitter 1 for UNINCORPORATED LEE, LEE
Email: Submitter-1@leecountyunincorporated.lee.gov
Phone: 222-333-4444
Address: 1 Fake Street
City: City
State: FL
ZIP: 12345
Status: Active
User Type: Local Government Employee

Roles:

| Role Type | County | Jurisdiction | |
|-----------|--------|--------------------|------------------------|
| Submitter | LEE | BONITA SPRINGS | Remove |
| Submitter | LEE | CAPE CORAL | |
| Submitter | LEE | FORT MYERS | |
| Submitter | LEE | FORT MYERS BEACH | |
| Submitter | LEE | SANIBEL | |
| Submitter | LEE | UNINCORPORATED LEE | |

[Disable](#)

Once a jurisdiction Approver disables a user, the profile is no longer active and attempt to log in will be halted. If an account needs to be enabled, the jurisdiction Approver will need to contact the Local Government Unit and request that the account be enabled.

Address Requirements

Address Standards

A unique address means all elements necessary to identify a specific location in a given city or county. A city-style address consists of a primary address number, a street name and, in some cases, secondary address elements. Although secondary address elements are no longer entered into the Address/Jurisdiction Database, the secondary address is required only in cases where the local jurisdiction for the primary address is located within two different local jurisdictions.

For example: A condominium complex where the primary address has building A through C located in one jurisdiction, while buildings D through F are in another.

The Address/Jurisdiction Database is based on address points; thus, individually numbered addresses must be entered in the database. A complete address must have all the address elements necessary to be entered into the database. A standardized address is one that is:

- Fully spelled out;
- Abbreviated by using the Postal Service standard abbreviations based on Postal Addressing Standards Publication #28; and
- Uses the proper format for the address style as shown in Postal Addressing Standards Publication #28.

Address Elements

The following address elements are used to define addresses the Address/Jurisdiction Database. Below are definitions and helpful hints for ensuring address records are not rejected during initialization of an upload file.

| Address Element | Standard Field Length | Example | Comments |
|-------------------------------|-----------------------|------------------------------|--|
| Number | 10 | 2250 | |
| Directional Prefix (PreDir) | 2 | NW, N, S, E, W, NE,SE, or SW | Any of the 8 basic compass directions using the abbreviations shown. If a pre-directional is used, it is the first element of a street name. These are displayed in the PointMatch system as a dropdown menu option to be selected. |
| Street Name | 35 | Shumard Oak | Referred to as the root street name. Components of the root street name, including compass directions like "North East" and road types like "Trail" are never abbreviated if they are part of the root. Numeric root names are an exception; they are always represented as numeric. |
| Suffix | 4 | Ave, Rd, Blvd, | A street suffix is the road type presented as a standard abbreviation following the root street name. These are displayed in the PointMatch system as a dropdown menu option to be selected. |
| Directional Postfix (PostDir) | 2 | NW, N, S, E, W, NE,SE, or SW | Any of the 8 basic compass directions using the abbreviations shown. If a post-directional is used it is the last element of a street name. These are displayed in the PointMatch system as a dropdown menu option to be selected. |
| City Name | 40 | Tallahassee | Refers to the mailing city name for the post office that serves the local area. |
| ZIP Code | 5 | 32301 | ZIP code for the mailing area that the address is a part of. |

Helpful Hints for Ensuring Data Quality

It is important to use standards that ensure street name and address consistency. All newly assigned street names should have spellings and pronunciations that are unique within the local area (including adjacent towns and areas serviced by the local post office). Only street names determined to be unique in accordance with local government addressing ordinance should be assigned.

The following are common challenges associated with local addressing and helpful hints to ensure data is as consistent as possible.

Capitalization: Uppercase letters are preferred on all address lines.

Spelling of City Names: Spell city names in their entirety. The only acceptable abbreviation is ST for Saint. EX: Port St Joe or St Petersburg.

Use of Abbreviations: Pre-directionals and post-directionals should appear as abbreviations (N, S, E) and not spelled out. Street suffixes and secondary unit designators should appear as abbreviations from the approved lists provided.

Two Directionals: When two directional words appear consecutively as one or two words, before the street name or following the street name or suffix, then the two words become either the pre- or the post-directionals. Exceptions are any combinations of “North-South” or “East-West” as consecutive words. In these cases, the second directional becomes part of the primary name and is spelled out completely in the primary name field.

Directional as Part of Street Name: If the directional word appears between the street name and the suffix, then it appears as part of the primary street name and should be spelled out. For example, “BAY W DRIVE” should appear as “BAY WEST DR.”

Two Suffixes: If an address has two consecutive words that appear on the suffix table, abbreviate the second of the two words according to the suffix table and place it in the suffix field. The first of the two words is part of the primary address. Spell it out in its entirety as part of the street name. For example, “789 MAIN AVENUE DRIVE” should appear as “789 MAIN AVENUE DR.”

Consistent Street Direction: Streets will be determined to run in one and only one direction, north-south or east-west, depending on the general trend of the street.

Name Duplication: Similar sounding names are considered to be duplication regardless of spelling. No duplication of names is permitted within the projected services area of a United States Post Office or of local public agencies such as fire and police departments. Preferably, the avoidance of duplication should be countywide because of future urbanization.

Continuity: A continuous street, or one proposed to be continuous, should bear the same name throughout, even though it changes directions. If it is interrupted by a channel, freeway, railroad, etc., and eventual connection is not probable, the segments should bear different names.

Neighboring Communities with Shared Roads: Neighboring communities should discuss the consistent naming and numbering of shared roads to eliminate any possible confusion. Examples of shared roads include roads that travel from one community into another, those that run into and then back out of a neighboring community, or those that follow a municipal or county boundary. If practical and the neighboring jurisdictions agree to keep the same name of a road running between the towns, the number should be consecutive, starting in one community and ending in the other. If neighboring communities cannot agree on the same name, each town's road segment should have a separate name and be numbered separately.

Use of Same Street Names in Neighboring Communities: This can be an issue when mail delivery in one town is performed by a post office in another town. In such cases, every effort should be made to avoid using the same street names. If this is not possible, every effort should be made to avoid duplicate street numbers to avoid postal/tax jurisdiction assignment problems.

Master Address List Format

Standard record formats are established to accommodate both the uploading and downloading of address files. For optimal efficiency, the format for all files are designed to catalogue every individual address and map them to the FIPS county, Place Feature ID, and other taxing jurisdiction (e.g., fire district) codes. The record layout for the Master Address List files will set the standard for the Change Log files, the Approved Pending Address files, and the Single Address download. Below is a description of all columns of the Master Address List file.

| Field Name | Field Description | Characters Maximum & Requirements | Comments |
|--------------|-------------------------------------|-----------------------------------|--|
| *NUMBER | House number | 10 – numeric | Required. If empty, the address record will be considered invalid. Any alphabetical characters used to denote unit numbers placed in this field will be removed. EX: “17A” to “17” |
| *PREDIR | Pre-directional | 2 – alpha | EX: NW, S, SE |
| *STNAME | Street name | 35 – alpha numeric | Required. If empty, the address record will be considered invalid. |
| *STSUFFIX | Street suffix | 4 – alpha | EX: BLVD |
| *POSTDIR | Post-directional | 2 – alpha | EX: NW, S, SE |
| UNITTYPE | Unit type | 4 - alpha | This field is only required for a multi-jurisdictional primary address. EX: APT |
| UNITNUM | Unit number | 5 – alpha numeric | This field is only required for a multi-jurisdictional primary address. EX: B4 |
| *MAILCITY | Mailing city name | 40 – alpha | Required. If empty, the address record will be considered invalid. EX: TALLAHASSEE |
| *ZIP | ZIP code | 5 – numeric | Required. If empty, the address record will be considered invalid. |
| ZIP+4 | ZIP code +4 | 4 – numeric | This field will be provided for downloading files, but is not required for uploading files. |
| *LAT | Latitude | 15 | This field heading is required for uploading files, but entries are optional. EX: +32.09876543210 |
| *LONG | Longitude | 15 | This field heading is required for uploading files, but entries are optional. EX: -082.0987650000 |
| STATEID | State FIPS Code | 2 – numeric | Always 12 |
| STATE | State name, abbreviated | 2 – alpha | Always FL |
| *COUNTYID | County FIPS Code | 3 – numeric | Required. |
| COUNTY | County name | 40 – alpha | |
| *FEATID | GNIS Place Feature ID | 9 – numeric | Required. |
| JURISDICTION | Jurisdiction name | 40 – alpha | |
| FIRECODE | Participating fire district code | 3 – numeric | Participating municipal fire codes are populated systematically. Special fire districts codes require manual insertion. |
| POLCODE | Participating municipal police code | 3 – numeric | Participating municipal police codes are populated systematically. |
| PENDING | Pending record | 3 – alpha | If a downloaded record is pending the field will be populated “YES” |
| EFFDATE | Effective date | 8 - YYYYMMDD | Date an address became effective. |
| *EVIDENCE | Name of competent evidence file | 50 - alpha numeric | This column is only required for uploading of address for objections. |

- * Files being uploaded only require a portion of these fields due to some fields being systematically corrected (e.g., municipal fire codes) or not needed for the upload process.
- # Only shown in the objections process.

Requesting Corrections

Submitting a Request for Correction

An objection to the Address/Jurisdiction Database can be initiated by any substantially affected party. There are many different circumstances where a correction is needed in the database and those include, but are not limited to:

- **An address is missing from the database** – no addresses match the address being searched for and the address information has been verified as correct.
- **Information in the address is incorrect** – incorrect information may be an incorrect ZIP code, misspelled street name, incorrect street suffix, missing or incorrect pre- or post-directionals, or incorrect city name.
- **The road name has changed** –road has been renamed and the old road name is still listed in the database instead of the new road name.
- **The taxing jurisdiction or county is incorrect** – occasionally a road may be listed in the incorrect taxing jurisdiction or county.

Before submitting an objection, it is suggested that a thorough search of the database be performed using the Address Lookup prior to filing the request. This will ensure a correction is needed.

Before granting an objection, consent will be required from the current and/or proposed jurisdiction.

Department of Revenue employees requesting adjustments in SUNTAX may also submit a request; however, address overrides or corrections must be referred to Account Management.

Only objections to the current effective database will be considered. Objections to pending database entries cannot and will not be processed and the user's request will be denied. Users are strongly encouraged to submit any requests for correction electronically. Alternative methods for submitting correction requests are available by contacting the Local Government Unit.

Part A Contact Information

When submitting a request online, certain users must register and/or log in to submit a request for correction. If this is the case, the system will redirect the user based on the contact type selected. Below is a brief description of the contact types and functions available by type.

Individual (insured or purchaser of communications services): this should be the owner of the service address being objected to. These users are not required to register to submit an objection and can only object to one service address. Validation of the user's email address will be required before the request can be submitted to the Local Government Unit for processing.

Communications Services Provider: is required to register to file an objection. These users can submit one request for multiple addresses at a time.

Communications Services Tax Address Vendor: is required to register and can submit multiple addresses for correction.

FDOR Employee: can log in using Department credentials to request SUNTAX corrections. These users can object to one service address at a time.

Insurance Company or Vendor: is required to register to file an objection. Users can submit one objection request for multiple addresses.

When a user requests a correction without logging into the system, the selection type of individual will be automatically selected. If the user tries to change to any other user type, the system will redirect the user to the Log In page. If the user is not registered, the page information explains who needs to register and that an objection cannot be filed until the account has been approved.

After a user type has been selected, all users are required to provide contact information. All fields are required except for title, company, and fax number. If the user is logged in, this information will be automatically filled in.

Part B Basis for Objection

In order to begin a correction request, the user must select one or more reasons for the request.

Registered users are offered the option of objecting to multiple addresses.

Three reasons for requesting a correction are available to all users, and a fourth reason is available to Department of Revenue Employees only:

1. Address has incorrect jurisdiction assigned (The taxing jurisdiction or county is incorrect)
2. Address does not exist (The address cannot be found)
3. Address is incorrect (misspelled, missing directional, incorrect ZIP code, etc.)
4. Others (SUNTAX corrections, etc.)

A user may select any single reason available, or a valid combination of reasons. If an invalid combination of reasons is selected, the system will not allow the user to proceed.

Valid combinations for single address corrections:

- Reasons 1 and 3
- Reasons 1 and 4 (DOR employees only)
- Reasons 3 and 4 (DOR employees only)
- Reasons 1, 3 and 4 (DOR employees only)

Valid combinations for multiple address corrections:

- Reasons 1 and 2
- Reasons 2 and 3

If you have any additional comments or information is necessary to explain the request, a comment section is provided.

Part C Service Address Information

Depending on the user's selection in the previous tab, single or multiple address corrections can be filed from this section.

Correcting a Single Address: If the request is for a single address, the user can fill in the required fields and proceed through to the next tab.

Correcting Multiple Addresses: If the request is for multiple addresses corrections, the system will provide the user with instructions for submitting a request for multiple incorrect addresses. Only registered users are allowed to submit these types of addresses.

The screenshot shows the 'Initiate Address Objection' web form, specifically the 'Part B: Basis for Objection' tab. The form is divided into three sections: 'Part A. Contact Information', 'Part B. Basis for Objection', and 'Part C. Service Address Information'. The 'Part B' section contains the following elements:

- A question: 'Are you objecting to multiple addresses?' with radio buttons for 'Yes' and 'No'. The 'No' option is selected, and a yellow callout box with an arrow points to it, stating 'SUNTAX corrections should always be "no"'. The 'Yes' option is disabled.
- A 'Reason:' section with four checkboxes:
 - Address has incorrect jurisdiction assigned
 - Address does not exist in the database
 - Address is incorrect
 - Others (SUNTAX corrections, etc.)
- A 'Comments:' section with a text area containing the text: 'Suntax has the distribution stamp as Orange County when the address is really located in Lake County.'

At the bottom of the form are 'Back' and 'Continue' buttons.

DOR employees: For a SUNTAX only correction (shown below), enter the location address as it is shown in SUNTAX as well as the Business Partner information.

Part D Competent Evidence

Competent evidence is proof that a service address is located in the taxing jurisdiction requested.

Individual users:

- Not required to immediately submit the evidence but is required to indicate what type of evidence is available. The Local Government Unit will do a thorough search of all county and other sources to determine if the evidence supports the objection. If this cannot be confirmed, the Local Government Unit will contact the user to send the evidence through electronic means.
- Evidence provided by the individual can be a property tax bill or other evidence that indicates the jurisdiction/county of the address

Registered users:

- Required to submit evidence files for all objection requests. Submission of the request is not allowed without uploading an evidence file.
- Evidence provided by registered users can be any of those listed in Part D.

DOR Employees:

Evidence is required. Acceptable evidence for DOR employees is dependent upon the type of correction requested.

- SUXTAX correction only: Copy and paste a screenshot of the current SUNTAX distribution stamp in a Word document along with either a) a screen shot of the address in Address Lookup, or b) a screen shot from the county property appraiser website listing for that address.
